

Tips:

- Do not hesitate to make contact.
- Do not trust the reputation that we look only for candidates who published in specific first tier journals (e.g. Cell, Nature and Science). We look for candidates who have interesting ideas, depth and originality and who have some proven record.
- A department will initially usually ask for 2 letters: from the PhD advisor and the postdoc host.
- A visit is mandatory for the Life Science, Chemistry and Physics faculties. For the Mathematics and Computer Science faculty a visit is not mandatory, but they also encourage the candidates to consider seriously visiting.
- During the visit you will be asked to give a job talk (and in some faculties, in a separate lecture, also to discuss your plans) and to meet for interviews with PIs.
- The process at the Weizmann Institute is longer than at some other Universities due to the need to receive external reviewers' letters as well as due to the two-tier process (initial review of your candidacy at the Faculty level to be followed by an Institutional committee review). You are therefore encouraged to initiate the process as early as possible.
